

# ASBESTOS REMOVAL

## Derriford Hospital - Plymouth

Gwella have recently undertaken the removal of Licensed asbestos on behalf of Nevada Construction. Nevada specialise in New Builds and Refurbishments in the Education, Healthcare, Historic and Public Sectors.

The 'Snowdrop Suite' within Plymouth's Derriford Hospital contained materials including Asbestos insulating board (AIB) boxings, panels and packers.

Derriford Hospital is a large teaching hospital in Plymouth, the hospital serves Plymouth and nearby areas of Devon and Cornwall. It also provides tertiary cardiothoracic surgery, neurosurgery and renal transplant surgery for the whole of the South West Peninsula. Working safely and methodically throughout the ward, Gwella carried out safe removals

in seven enclosures. Communication from all parties was the key for this project being successful, keeping minimum disruption whilst delivering a high standard of work and allowing the project to be delivered on time.

With great feedback from the client, we look forward to supporting Nevada Construction with any future asbestos removal projects.

*"Gwella were a very friendly and professional company, completed the works in the time agreed with the highest quality and care, hassle-free. It would be a pleasure to see them on many of our future projects."*
